                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   -i- SUBCELLULAR LOCATION: Type I membrane protein (Potential).
-i- TISSUB SPECIFICITY: Found in spleen, testis, prostate and fetal liver. Expression limited to vascular muscle of testis, smooth muscle of prostate stroma, heart muscle, skeletal muscle, crypts of small intestine, and red pulp of spleen.
-i- PTM: N-glycosylated.
-i- SIMILARITY: Contains 1 C-type lectin family domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             SEQUENCE OF 27-273 FROM N.A.

1. Biol. Chem. 275:21539-21548(2000).
2. I- FUNCTION: MEDIATER THE ENDOCYTOSIS OF GLYCOPROTEINS BY MACROPHAGES, IN SEVERAL RECOGNITION AND UPTAKE PROCESSES.
2. SUBCELLUAR LOCATION: Type I membrane protein.
3. CAREOHYDRATE. CRD 1-3 HAVE AT MOST VERY WEAK AFFINITY FOR CARBOHYDRATE. CRD 4 SHOWS THE HIGHEST AFFINITY BINDING AND HAS CHILSPECIFICITY FOR A VARIETY OF MONOSACCHARIDES. A LEAST 3 CRDS (4 5, AND 7) ARE REQUIRED FOR HIGH AFFINITY BINDING AND ENDOCATOSIS OF MULLITVALENT GLYCOCOMUGATES.
3. CHORD AND ARE REQUIRED FOR HIGH AFFINITY BINDING AND ENTRY: Contains 8 C-type lectin domains.
3. SIMILARITY: Contains 1 ricin B-type lectin domain.
3. SIMILARITY: Contains 1 ricin B-type lectin domain.
3. DATABASE: NAME=PROW: NOTE=PROW 2:85-89(2001);

ISOId=09ERB4-3; Sequence=VSP 003092;
-!- TISSUE SPECIFICITY: In kidney is expressed in the papillary area,
but not in glomeruli.
-!- DEVELOPMENTAL STAGE: Disappears after the cartilage development
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Glycoprotein; Proteoglycan; Lectin; Extracellular matrix; Sushi

BEOL. Chem. 274:2044-20449 (1999).

-1- FUNCTION: May play a role in intercellular signaling and in connecting cells with the extracellular matrix. May take part in the regulation of cell motility, growth and differentiation. Binds hyaluronic acid.
-1- SUBDINIT: Interacts with FBLNI.
-1- SUBCELLULAR LOCATION: Secreted; extracellular matrix.
                                                                                                                                                                                                                                                                                                                                                   STRAIN=CS7BL/6;

-1-TISSUE SPECIFICITY: V2 is found only in brain.
-1-DEVELOPMENTAL STAGE: Disappears after the cartilage development.
-1-SIMILARITY: Contains 1 immunoglobulin-like V-type domain.
-1-SIMILARITY: Contains 2 link domains.
-1-SIMILARITY: Contains 1 C-type lectin family domain.
-1-SIMILARITY: Contains 1 Sushi (SCR) domain.
-1-SIMILARITY: Contains 1 Sushi (SCR) domain.
-1-SIMILARITY: BELONGS TO THE AGGRECAN/VERSICAN PROTEOGLYCAN FAMILY.

"Differential expression of versican isoforms in brain tumors.";
"Neuropathol. Exp. Neurol. 55:28-531(1996).
-! FUNCTION: May play a role in intercellular signaling and in connecting cells with the extracellular matrix. May take part in the regulation of cell motility, growth and differentiation. Binds hyaluronic acid.
-! SUBGNIT: Interacts with FBLNI (By similarity).
-! SUBCELULAR LOCATION: Secreted; extracellular matrix.
-! ALTERNATIVE PRODUCTS:
Event-Alternative splicing; Named isoforms=5;
Comment-Additional isoforms seem to exist;

shinomura Conting of Pola, a large chondroitin sulfate proteoglycan expressed during chondrogenesis in chick limb buds. Alternative spliced multiforms of Fg-M and their relationships to versican.";
J. Biol. Chem. 268:14461-14469(1993).
-I- FUNCTION: May play a role in intercellular signaling and in connecting cells with the extracellular matrix. May take part in the regulation of cell motility, growth and differentiation. Binds hyaluronic acid.

                         -i- PTM: CONTAINS MOSTLY CHONDROITIN SULFATE, BUT ALSO KERATAN SULFATE CHAINS, N.LINKED AND O-LINKED OLIGOSACCHARIDES (BY SIMILARITY).
-i- SIMILARITY: Contains 1 immunoglobulin-like V-type domain.
-i- SIMILARITY: Contains 1 link domains.
-i- SIMILARITY: Contains 1 C-type lectin family domain.
-i- SIMILARITY: Contains 1 Sushi (SCR) domain.
-i- SIMILARITY: Contains 1 Sushi (SCR) domain.
-i- SIMILARITY: Contains 1 SGF-like domain.
-i- SIMILARITY: CONTAINS 1 SGF-like domain.

chondroitin sulfate proteoglycan PG-M core protein - chicken
C;Species: Gallus gallus (chicken)
C;Date: 21-Sep-1993 #sequence_revision 18-Nov-1994 #text_change 21-Jul-2000
C;Accession: A47171
R;Shinomura, T.; Nishida, Y.; Ito, K.; Kimata, K.
J. Biol. Chem. 268, 14461-14469, 1993
A;Title: cDNA cloning of PG-M, a large chondroitin sulfate proteoglycan expressed durin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       A; Cross-references: GB:D13542; NID:g391643; PIDN:BAA02742.1; PID:g391644
